

Murphy *Rebel* A/B Project

Murphy *Rebel* Canadian Amateur Built Project – Serial No. 393R (1995)

If you are looking for an almost-ready-to-fly rugged, great performing *Rebel*, this is your chance !

Almost complete project (about 95%), in Orangeville, Ontario. Being built as an Amateur Built, with MD-RA pre-cover inspections completed – only final inspection needed after completion, before flight !

Airframe is completed and painted (cream with green trim), on the gear, with engine mounted (rebuilt Subaru 2.2 with H.M. belt redrive). Firewall in normal position, so Subaru can easily be replaced with anything from a Lycoming O-320 to a Rotax 912 with no changes to airframe required.

This Rebel has the electric elevator trim servo installed, and the good bungee gear with JDM wheels & brakes, float attach fittings, and Plexiglas windshield. Instruments include altimeter, airspeed, compass, electric turn & bank, rate of climb, and electronic engine monitor. Val-Com radio and intercom installed.

Some tools and clecos can be included. Does need wiring, plumbing, various odds and ends of assembly (fastening instruments, windshield, completing doors, etc.), some Ontario Mods and some factory S/B's.
